

# APPLICATION NOTE GATE ACCESS

Optimized control and visibility with Gate Access solutions.

To effectuate heavy traffic in diverse production industries and logistic sites, IDEN TEC SOLUTIONS created Gate Access solutions. To accomplish control and visibility of materials, optimize logistical processes and adept vehicle processing.

Leveraged on the powerful SensorS-MART platform, Gate Access applications automatically identify trucks, trailers, containers and materials at key points.

## BENEFITS

- Improved operational safety
- Reduced idle traffic resulting in a smaller Co2 footprint.
- Increased visibility
- Web based portal for rapid customer and supplier processing
- Continuous analysis of KPI
- More efficient resource deployment and utilization
- Enhanced just-in-time delivery management

## GATE ACCESS

Large industrial production sites, logistics hubs and aggregate facilities often process massive quantities of materials daily. The amount of time spent handling this heavy traffic can be significant when labour intensive registration procedures are used for materials tracking.

Stringent safety regulations and documentation requirements often cause long delays in the logistical flow compromising the overall productivity of an organisation. Traditional methods used to solve this challenge involve increased labour and associated costs and do not eliminate the potential for human error.

IDEN TEC SOLUTIONS Gate Access Systems are proven to deliver optimized control and visibility of materials & logistical processes as well as a high level of efficiency in vehicle processing. Immediately upon solution deployment, time and resources are managed more efficiently, overall safety is increased and CO2 emissions are immediately reduced. Furthermore, by increasing business process visibility key performance indicator (KPI) optimization can be achieved throughout the entire business process while also diligently enforcing legal mandates.

IDEN TEC SOLUTIONS Gate Access applications are leveraged on the powerful SensorS-MART Platform. The flexible infrastructure of Sensor-SMART allows for easy integration with existing IT systems to provide reliable data in even in the most challenging surroundings. The SensorSMART Platform can also host multiple applications simultaneously including personnel safety and optimization systems.
